OGUNDIPE PRISCILLA

Data Entry & Customer Service Representative
ogundipepriscila9@gmail.com | 09127925880 | Remote (Nigeria)

PROFILE SUMMARY

Detail-oriented Computer Science graduate with hands-on experience maintaining databases, processing structured records, and supporting end users in a professional software environment. Comfortable working across CRM-style systems, spreadsheets, and internal databases with a strong eye for accuracy. Combines a technical foundation in SQL and data management with clear written and verbal communication, making the transition from software support into a data-entry and customer-facing role a natural fit. Reliable, organized, and confident working independently in a remote, deadline-driven setting.

CORE SKILLS

- Data entry & database maintenance (SQL Server)
- Microsoft Excel & Office Suite
- Records auditing & quality checks
- ASP.NET MVC, C#, HTML/CSS
- Customer support & issue resolution
- Accurate, high-speed typing & attention to detail
- Written & verbal communication
- Time management & multitasking

EXPERIENCE

Junior Developer
Mar 2025 – Sep 2025

Hamotech Communication International

- Entered, updated, and maintained structured records in SQL Server databases, ensuring data accuracy and consistency across systems.
- Verified and cross-checked data from internal forms and records before entry, catching and correcting discrepancies to maintain data integrity.
- Built and maintained ASP.NET MVC application modules, including record-management screens used to organize and retrieve stored data efficiently.
- Collaborated with team members across the development process, communicating updates clearly and meeting delivery deadlines in a fast-paced environment.
- Provided front-facing support during testing, walking users through features and resolving reported issues promptly and courteously.

RELEVANT PROJECTS

Smart Inventory Management System

- Designed a system to record stock levels, process sales transactions, and generate customer invoices — mirroring the accuracy and record-keeping demands of order and data processing work.

AI-Driven Crop Disease Forecast & Advisory System

- Built a dashboard-driven platform handling structured data entry (location, image uploads) and returning organized, easy-to-read reports for end users.
